

G, D., Male. Age 74

Patient presented to us with prostate cancer, elevated PSA, fatigue and uncomfortable weight gain. He has been diagnosed with prostate cancer by biopsy. He is a minister and is having trouble with his professional requirements and is becoming despondent. His symptoms include urinary frequency and slow, impeded urinary flow.

Following the start of the LifeOne Formula patients' symptoms have improved steadily. His energy levels have increased, his urinary flow has increased and urinary frequency has decreased. He has lost a substantial amount of fat around his midline and is feeling much healthier.

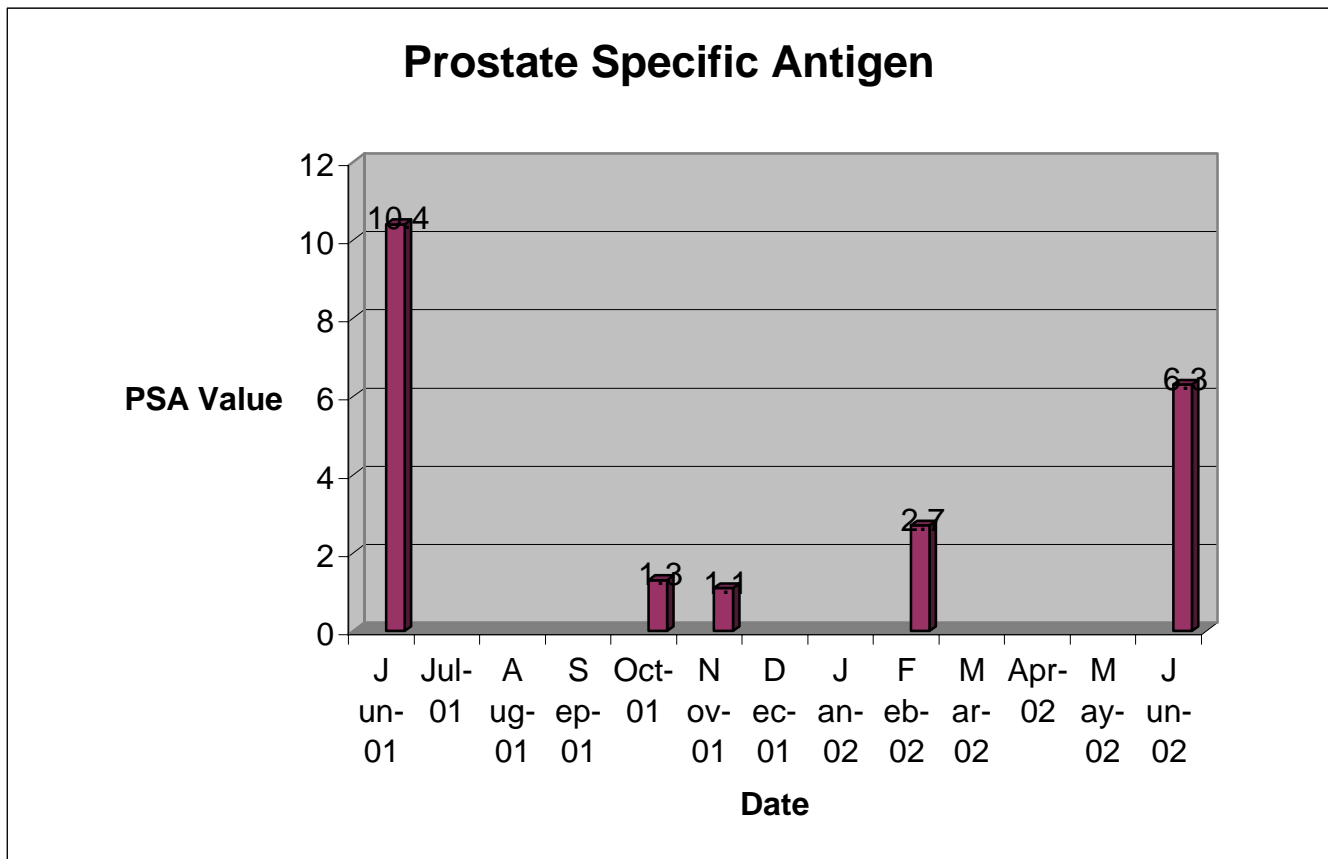

07/05/93 Acute Prostatitis

07/12/01 Prostate cancer determined by biopsy.

07/20/01 Started LifeOne Formula

12/10/01 Patient stopped LifeOne Formula due to dramatically reduced PSA.

06/25/02 Patient has restarted LifeOne Formula due to dramatically increasing PSA values.

Normal PSA Level <4.0

Note: Patient stopped LifeOne Formula on 12/10/01 due to normalization of his PSA. After noting dramatic PSA increases the patient has restarted the LifeOne Formula the end of June, 2002. He is still alive and actively running his congregation. Overall he is doing very well.
